## EDUCATION

**Arizona State University** 2027 (expected)
Ph.D. in Economics
*Visiting Student, University of Minnesota, Fall 2026*

**Duke University** 2022
M.S. in Economics & Computation

**Universidad Iberoamericana, Mexico City** 2017
B.A. in Economics

## RESEARCH FIELDS

Macroeconomics, International Economics, Development Economics

## WORKING PAPERS

**Tariffs, Rules of Origin, and the Reorganization of North American Supply Chains**
*Job Market Paper*
This paper quantifies how tariffs and rules of origin drive the reorganization of North American supply chains around Mexico, and what that reorganization implies for welfare. Between 2018 and 2025 three shocks reshaped this landscape: the U.S.-China trade war, the 2020 NAFTA-to-USMCA transition, and a 2025 U.S. executive order sharply raising tariffs on Mexican imports outside USMCA preference. I develop a global sourcing model in which heterogeneous firms choose source countries and, product by product, whether to export under USMCA, thus having to comply with rules of origin, and calibrate it on matched census-customs microdata. Through the lens of the model, USMCA protects Mexico from U.S. tariffs, given that firms respond to a higher tariff on non-compliant goods by complying with the rules of origin rather than paying it. The value of the agreement therefore grows sharply with that tariff, meaning that eliminating it would impose a welfare loss about six times larger at the tariff level set by the 2025 order than at the tariffs in place before it. In contrast, the transition from NAFTA to USMCA was roughly welfare-neutral for Mexico, while the shift in relative sourcing efficiency across countries raised welfare.

**Foreign Firm Footprints: Entry, Agglomeration and Welfare in Mexico**
Foreign firms account for less than 1 % of Mexican manufacturing establishments but 40 % of employment and 60 % of exports, and they agglomerate with same-origin firms into distinct regional corridors. Using data from seven waves of the Economic Census (1994–2024), this paper develops and estimates a quantitative spatial model of foreign and domestic firm location in which origin- and industry-specific agglomeration produce this geographic dispersion. I use the results to conduct counterfactual exercises evaluating how U.S. tariff impositions would affect firm location decisions, input markets, and welfare across Mexican commuting zones. Under a 25 % tariff on Mexican exports, the income-weighted average commuting zone loses 0.051 log points of real income, and the losses are largest where foreign firms are most present.

**Labor Market Power and Informality**
This paper documents differences in wage markdowns in both the formal and informal sectors of the Mexican economy and proposes a theory linking labor market power to the structure of formal employment costs. The core insight is that firms with monopsony power can pass the implicit tax of formal hiring, including social security contributions, retirement funds, and firing costs, onto workers through lower wages, generating higher observed markdowns among more formal firms.

## TEACHING EXPERIENCE

**Macroeconomic Principles**, Instructor Summer 2025

## PROFESSIONAL EXPERIENCE

**Banco de México - General Directorate of Economic Research**

Summer Researcher 2026
Economist (Analyst) 2018–2020

**Sura México**

Trainee, Wealth Management Division 2017

## RESEARCH ASSISTANT EXPERIENCE

**Arizona State University**, for Prof. Samuel Young 2024–
**Georgetown University in Qatar**, for Prof. Santiago Garcia-Couto 2023–2024
**Duke University**, for Prof. Matthias Kehrig 2021–2022
for Prof. Marjorie McElroy 2021–2022

## TEACHING ASSISTANT EXPERIENCE

**Arizona State University**, Development Economics Fall 2023, Spring 2024, Fall 2024, Spring 2025
for Prof. Manjira Datta

## SEMINAR AND CONFERENCE PRESENTATIONS

**2026** ASU Macroeconomics Workshop; Banco de México Summer Research Program; University of Minnesota Trade Workshop; Southern Economic Association (SEA) Annual Meeting

**2025** ASU Macroeconomics Workshop

## AWARDS

2026 ASU Dissertation Progress Award in Economics

2020 Duke Economics Masters Scholar Award

## OTHER

U.S. Census Bureau: Special Sworn Status 2025–

## SKILLS

**Software** Stata, R, Python, MATLAB, EViews, LaTeX, Microsoft Office
**Languages** English (Fluent), Spanish (Native)
